Printing techniques

Four-colour screen printing on DM Magic White.

PRINTING

of SIBU DESIGN sheets

The surfaces of SIBU DESIGN sheets can be printed using screen or digital processes and they give the design sheets a personal touch.

In principle, all products of the Deco-line, MultiStyle, MultiStyle Fashion and Structure-line product groups can be digitally printed.

The plain surfaces of the Deco-line product group are ideal for screen printing. The printing result depends on the respective printing motif. Original samples are readily available for trials.

Find the product suitability at www.sibu.at

Our sales team will be pleased to supply you with further information!

Two-colour screen printing
on DM Silver, thermally shaped.

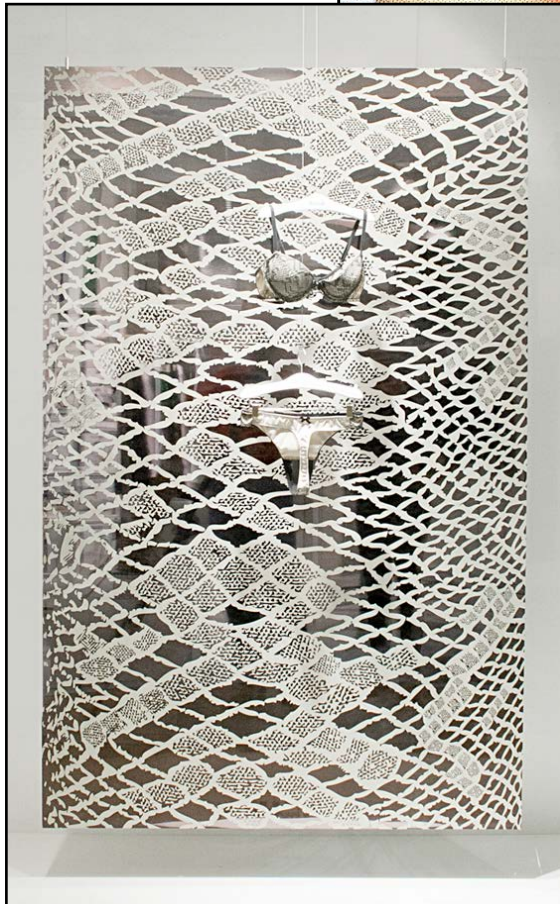

SCREEN PRINTING

As already mentioned, plain surfaces such as mirror or metallic effect design sheets of the Deco-line product group are ideal for the screen printing method.

For this application SIBU DESIGN recommends the screen ink systems of the following manufacturers:

PRÖLL

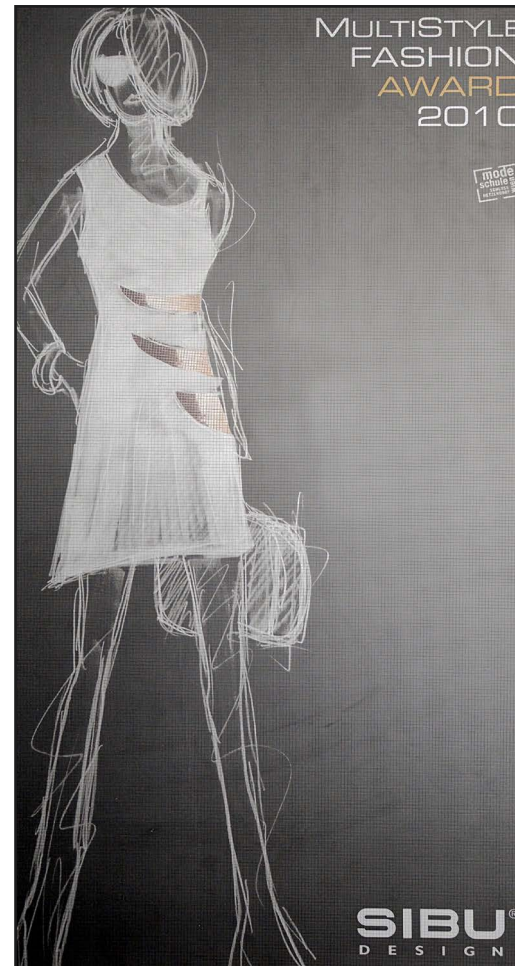

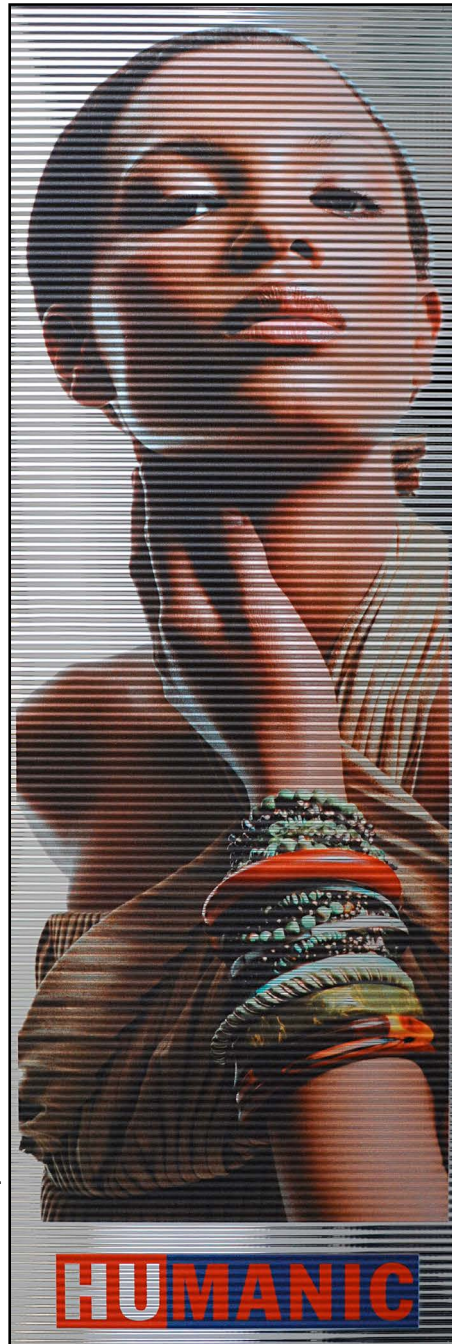

Detailed information is available in the appendix!

One-colour screen printing on DM Anthracite.

Digital printing on SIBU DESIGN sheets.

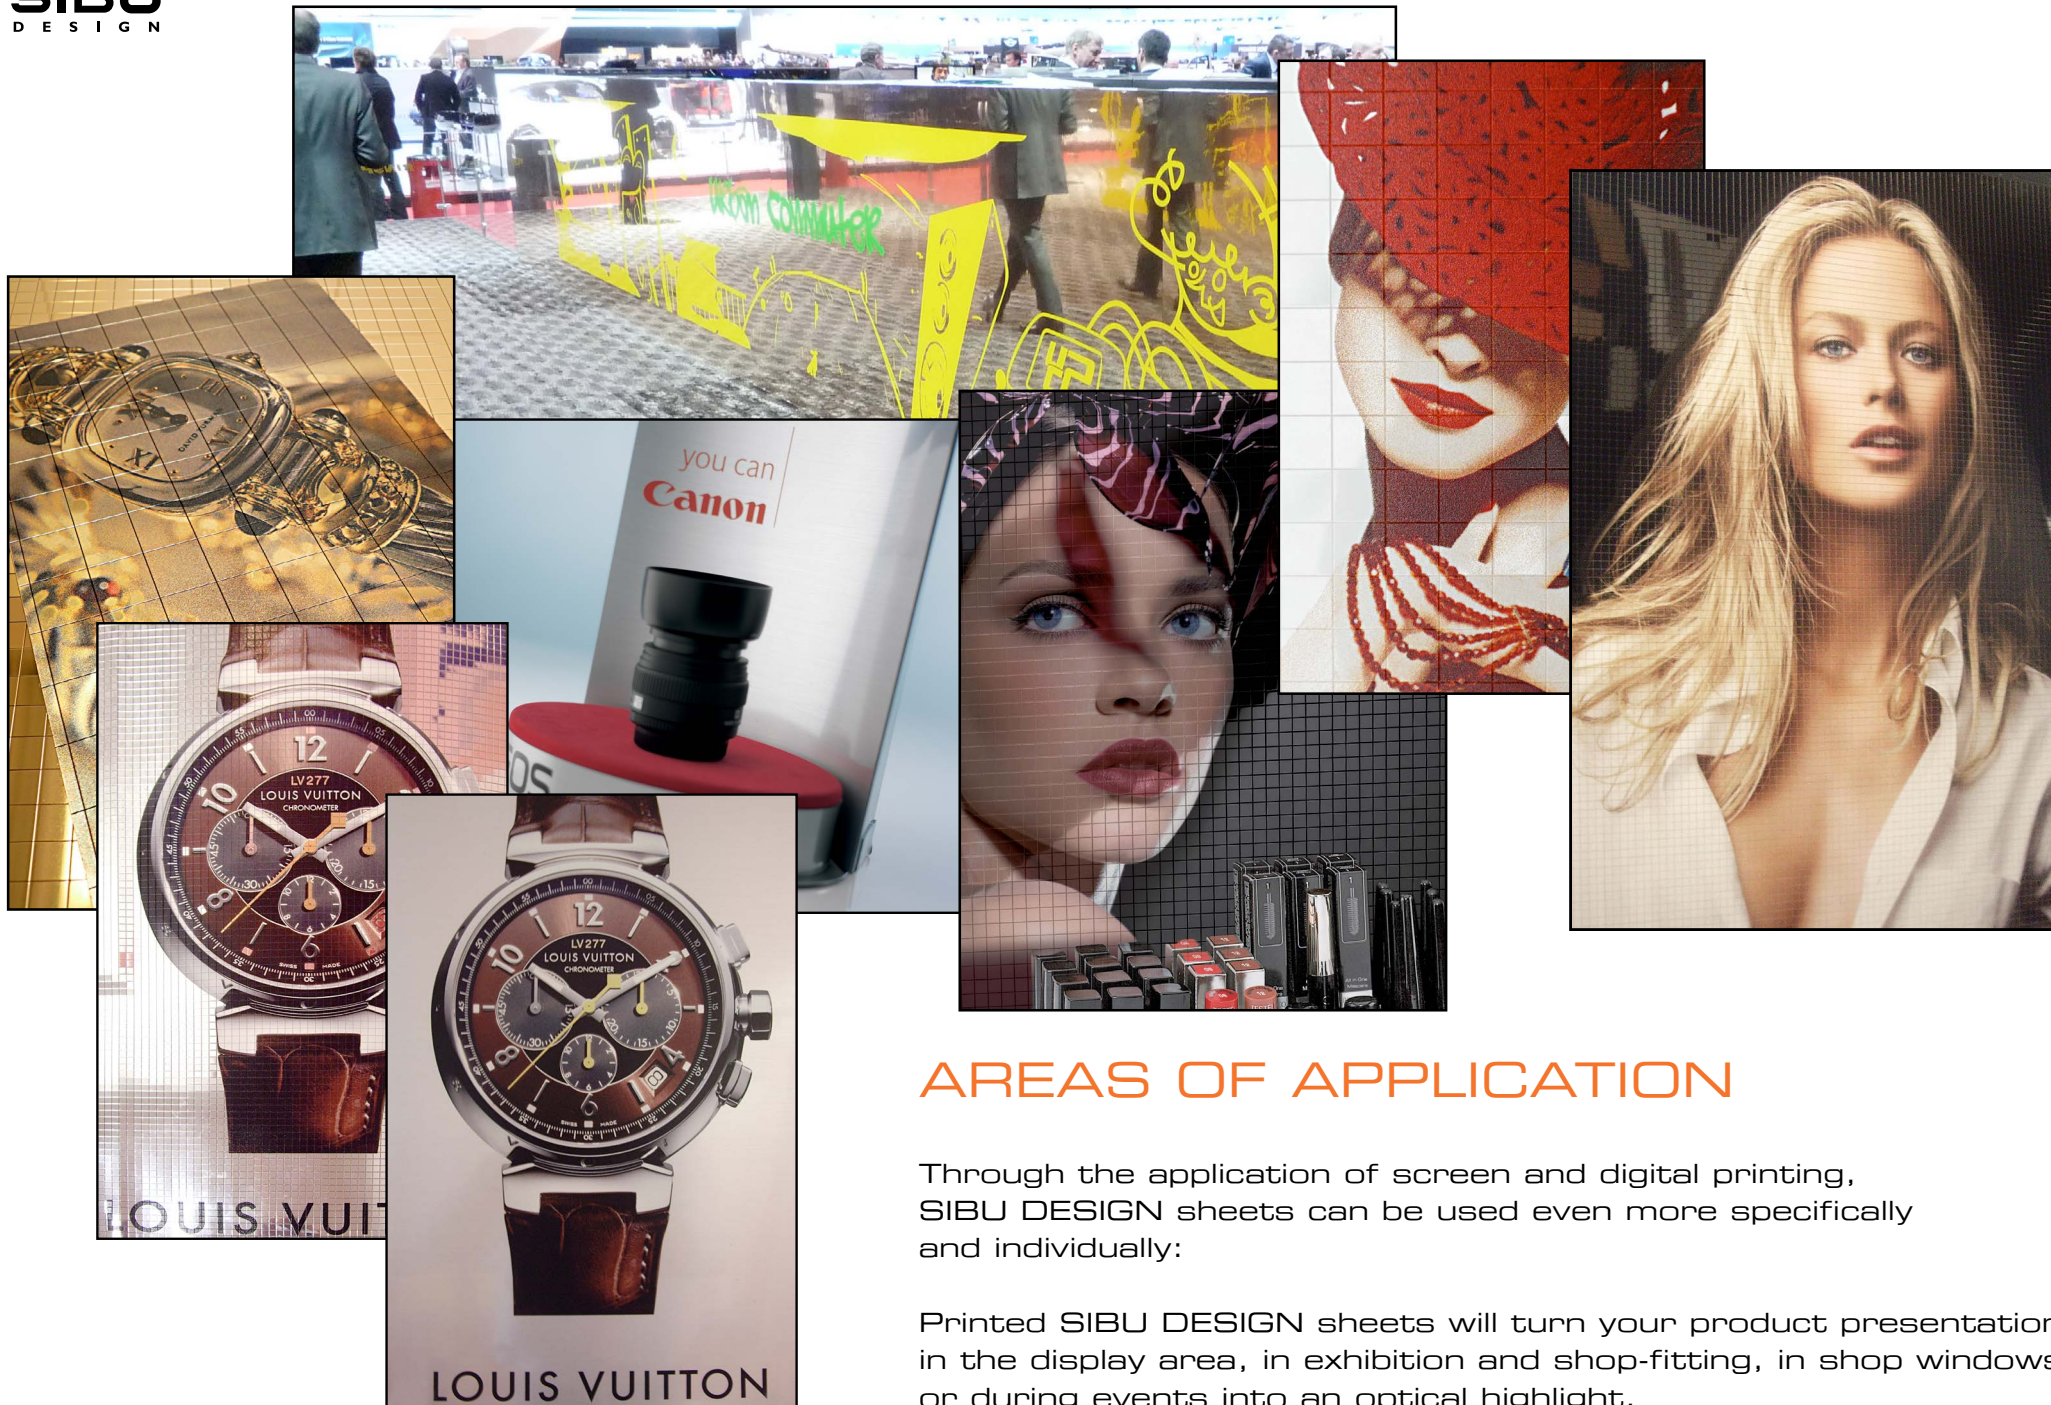

Digital printing on MultiStyle Fashion Silver PF met 5x5 flex. Speed.

DIGITAL PRINTING

Most of the SIBU DESIGN sheets in stock are suitable for digital printing.

With this printing technique you can use plain design sheets of the Deco-line, Punch-line, Punch-line 3D, SibUGlas and MultiStyle product groups as well as structured design sheets of the Structure-line and Acrylic-line series.

AREAS OF APPLICATION

Through the application of screen and digital printing, SIBU DESIGN sheets can be used even more specifically and individually:

Printed SIBU DESIGN sheets will turn your product presentation in the display area, in exhibition and shop-fitting, in shop windows or during events into an optical highlight.

ATTENTION: The final adhesion performance will set in very slowly and can take up to one week on air-drying (20 °C.).
